

MedPresence

Securely Connecting Teams Virtually

With the growing complexity of today's multidisciplinary procedures, reliable real-time access to clinical consultations, training and education is becoming more important than ever. However, physical assistance by an expert is not always possible, feasible or desirable. Access to the procedure room is always limited and security, patient privacy and infection control are significant concerns to any hospital. MedPresence is a virtual presence clinical collaboration solution that enables teams to quickly bring needed expertise into a procedure room from across the organization, around the world and at any time virtually. With MedPresence, participants interact and communicate, just as if they were in the room together, leading to increased clinical efficiency. Teams of experts are supported by an interactive experience combining video, audio and relevant contextual imagery and information, with shared control and two-way real-time telestration.

Clinical Benefits

- **Peer-to-peer consultancy:** access to external consultants and their expertise, resulting in improved health outcomes.
- **Optimized infection control** by limiting the number of experts in the physical procedure or operating room (OR).
- Utilization of live or saved MedPresence sessions **to train, educate and improve procedural techniques.**
- Support of **well-informed decision-making** in a critical procedure thanks to an expert opinion via virtual presence.

Economic Benefits

- Enabling new collaboration models resulting in **efficient problem-solving** and **increased productivity.**
- **Reduced liability and costs** associated with patient infection and longer lengths of stay by limiting number of individuals in the OR.
- **Reduced travel costs** for subject matter experts needed in complex procedures.
- Gaining **access to technical support** virtually, reducing the OR downtime.

Security Benefits

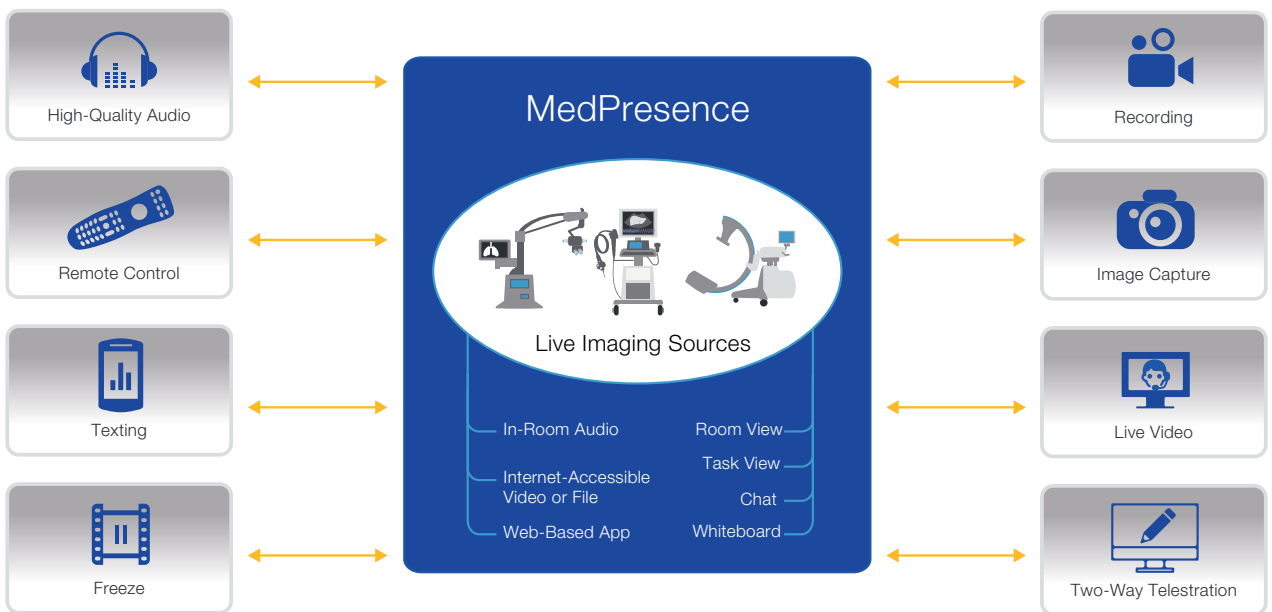

- **End-to-end security** that includes encryption of MedPresence video streams (AES 256 encryption) and **secure storage of MedPresence collaborators' data.**
- Industry-expert-tested solution to **protect against unauthorized access and use of information** (Black Hills Information Security).
- **Session access only for authorized participants** (e.g. two-factor authentication, AD integration).

Expanding the Power of EASYSUITE Integrated OR

The addition of MedPresence to an EASYSUITE integrated OR enables clinicians to share all relevant imaging sources with remote colleagues easily and with the same high quality as if they were viewing those sources side-by-side in the room.

Features

- Two-way telestration, live-video freeze, image capture recording, remote control.
- Flexible camera and video source configuration.
- Touch-enabled access for in-suite or control-room deployment.
- Masking of patient health information (only with EasySuite) protects patient and clinician privacy, supporting GDPR compliance.
- Compatibility with EasySuite and nCare procedure rooms.
- Local or hospital-wide session recording and storage option via VaultStream.
- One-button privacy mode disables outbound audio and video.
